

David Gerard

Associate Professor

American University

Department of Mathematics and Statistics

3501 Nebraska Ave NW, DMTI 106E

Washington, DC 20016, USA

Phone: +1-202-885-3022

Email: dgerard@american.edu

Homepage: <https://dcgerard.github.io/>

GitHub: <https://github.com/dcgerard/>

Last updated: August 21, 2024

Education

Ph.D. Statistics, University of Washington, June 2015.

Advised by Professor [Peter Hoff](#).

M.S. Statistics, The Ohio State University, June 2012.

B.S. Mathematics, The Ohio State University, June 2010.

B.S. Molecular Genetics, The Ohio State University, June 2010.

Professional Experience

Associate Professor, American University: 09/2024 – Present

Assistant Professor, American University: 08/2018 – 08/2024.

Postdoctoral Scholar, University of Chicago: 09/2015 – 07/2018.

Advised by Professor [Matthew Stephens](#).

Awarded Grants

External

National Science Foundation, Grant No. [2132247](#). “A U-statistic approach to population genetics”. \$188,694.00. 09/2021–12/2023. Role: PI.

Internal

College of Arts and Sciences Mathias Research Fellowship, the American University Department of Mathematics and Statistics, and the Howard Hughes Medical Institute. “Population Structure Estimation for Polyploids,”. \$5,000. 2022. Role: Faculty Advisor to Toe, S. C.

Department of Mathematics and Statistics Student Research Projects in the Mathematical Sciences. “Genotype Likelihood Approaches to Linkage Disequilibrium Estimation in Polyploids”. \$2000. 2022. Role: Faculty Advisor to Scartz, D. T.

Mellon Grant from the College of Arts and Sciences, American University. “Genome-wide Inference Under Uncertainty,”. \$1,200. 2018–2019. Role: PI.

Teaching Experience

Statistical Genetics 08/2024 – 12/2024

This was a topics course based on my research field. I review discrete distributions and inference procedures in the context of statistical genetics. I then introduce common tasks like Hardy-Weinberg equilibrium tests, linkage disequilibrium estimation, and structure estimation.

Advanced R 01/2022 – 05/2022

This course prepares students for software development using the R statistical programming language. Topics include: version control via git and its command line interface, package development, unit testing, base R data structures, environments, object oriented programming via S3 and S4, metaprogramming, interfacing with C++ via Rcpp, parallel processing with futures, and batch scheduling jobs via LSF.

<https://dcgerard.github.io/advancedr/>.

Regression 08/2021 – 12/2021, 08/2022 – 12/2022, 01/2024–05/2024

This is a standard regression analysis course for students who have a very light statistical background. We cover the simple/multiple linear regression model, interpretation, estimation and testing procedures, diagnostics, model building, and practical considerations. Students are taught how to implement regression using the R statistical programming language.

https://dcgerard.github.io/stat_415_615/.

Data Science 08/2019 – 12/2020, 08/2023 – 12/2023

This course trains students on a suite of tools necessary for a successful career in Data Science, including version control (git), large(ish) data analysis (data.table), and data communication (R Shiny). I also provide a review of basic statistical inference and emphasize how one performs such inference in R. I teach this course almost entirely using GitHub Classroom.

<https://data-science-master.github.io/lectures/>.

Statistical Programming in R 01/2019 – 05/2019, 08/2019 – 12/2019

This course takes students with little or no background in computing and guides them through most of the material covered in R for Data Science.

https://dcgerard.github.io/stat_412_612/.

Biostatistics 08/2018 – 12/2018, 08/2024 – 12/2024

Introductory biostatistics at the undergraduate level. This serves as the main statistical methods course for Public Health Science majors. I reviewed basic statistical concepts before introducing the students to ANOVA, linear models, and logistic regression, all within the framework of public health applications.

Lectures are mostly board-work. The following website contains R examples: https://dcgerard.github.io/stat_320/

Statistical Methods 08/2018 – 12/2018

This course was designed to get physical and social science masters students proficient enough to analyze their own data and convey statistical results to their peers. This course focused on actually analyzing data, interpreting results, and effectively communicating statistical conclusions.

<https://dcgerard.github.io/stat614/>.

Lecturer of introductory statistics (University of Chicago) 09/2017 – 12/2017

This course was a standard introduction to Statistics for non-majors plus some light mathematical theory. The content included introductions to probability, inference, and the R statistical computing language.

<https://dcgerard.github.io/stat234/index.html>.

Lecturer of introductory statistics (University of Washington) 06/2013 – 09/2013

This course was designed to introduce Statistics to students who had little mathematical maturity. Course content included comparisons of good sampling designs versus bad sampling designs, conditions under which claims of causality may be made, confounding variables, good and bad measures for answering questions of interest, describing relationships between variables, and good and bad graphics to describe data.

Graduate Teaching Assistant (University of Washington) 09/2012 – 06/2013

Lecturer of introductory statistics (The Ohio State University) 09/2011 – 12/2011

Phylogenetic Workshop Assistant (The Ohio State University) 06/2011 – 08/2011

Phylogenetic Workshop Assistant (The Ohio State University) 06/2010 – 08/2010

Undergraduate Teaching Assistant (The Ohio State University) 09/2008 – 12/2008

Coding

Most of my research involves a large computational component. I make sure to implement and release all methods I develop.

Authored R Packages:

CRAN: [hwep](#), [ldsep](#), [seqgendiff](#), [updog](#), [tenrs](#),

GitHub: [hose](#), [vicar](#), [rmexact](#), [phwelike](#), [hexocto](#).

Advanced training: R, \LaTeX .

Intermediate training: C++, Shell.

Familiar: Python, Matlab/Octave, Mathematica.

Reproducible Research

I emphasize extreme reproducibility in my research projects. All analysis scripts are publicly posted, with code linked to data. Most of the repositories below require only a single command line to reproduce all of the results of the paper.
